

Energisa Soluções | Results for 1st quarter of 2014

Cataguases, May 15, 2014 - The Management of Energisa Soluções S/A (“Company”) hereby presents its results for the first quarter of 2014 (1Q14). The following financial and operational information is presented on a consolidated basis, in accordance with international financial reporting standards (IFRS), except when stated otherwise.

1 - Business profile and economic-financial headlines

Energisa Soluções, a wholly owned subsidiary of Energisa S/A, provides energy services, offering integrated, innovative and high-added-value solutions to the generator, transmitter distributor and industrial corporate segments.

The company primarily operates in the following segments:

- **Hydroelectric power plants, Wind farms, thermal power plants and Small Hydroelectric Power Stations (SHPs):** Operations, Maintenance, Automation, Commissioning and Proprietary Engineering
- **Transmission Lines and Substations:** Projects, Construction Management, Automation, Maintenance, Operations and Commissioning
- **Industrial and Distribution:** Maintenance and recovery of power transformers.

The other strategic solutions carried out in the first quarter of 2014 include Energisa Soluções’ consolidation in the northeast by creating a technical base in that region. Located between the municipalities of João Câmara (Rio Grande do Norte) and Parazinho (Rio Grande do Norte), the base is currently responsible for 19 wind parks and has a team comprising engineers and technicians who are trained in equipment, predictive, preventive and corrective maintenance. The base is equipped with vehicles, equipment and a full infrastructure to respond to any services which are requested.

In addition to the northeast base, Energisa Soluções is developing a positioning strategy in the center-west, by opening a new base in that region. This base will be responsible for services to third party and intercompany clients, with the goal of penetrating one of the regions with the highest growth in Brazil and to support obtaining results from companies which were recently acquired from Grupo Rede through our parent company Energisa S/A.

The following strategic agreements which were also established during the first quarter should be highlighted:

- Commissioning and maintaining Energisa Geração’s wind parks
 - Maintaining a substation located on an oil rig
 - Supplying operators for the Guilman Amorim hydroelectric power plant
 - Organization, Systems and Methods (O&M) at two of Furnas’ small hydro centers
 - Long-term O&M in the mining sector
 - Modernizing the protection system for Tractebel’s 230 kV substation
 - Managing construction of a substation and transmission line for Grupo Energisa’s new distribution units (south/southeast network)
 - Industrial maintenance for three major industries, including Arcelor Mittal
-

Administrative actions

Energisa Soluções recently successfully introduced a Customer Relationship Management (CRM) system module, which allows improvements in client management by using an efficient tool that is fundamental for the company's growth and development and to expand its activities in the electrical sector.

Use of a Maintenance Management System (SGM) has also been developed, which is undergoing a test and consolidation phase. Energisa Soluções is preparing for the next stage, which will be introducing a mobility tool for the field teams. This tool will allow remote tracking of teams and dynamism and agility in actions developed in the field, in addition to facilitating communication.
